

triphenylphosphineacetyl palladium; copper complex salts of diphenanthroline, substituted diphenanthroline, 2,2' : 6',2''-terpyridine, pyridinimine, or cross-linked aliphatic diamine, and copper complexes such as acetyl[4-4'-di(5-nonyl)-2,2'-bipyridine] copper, hexafluorophosphine-di[4-4'-di(5-nonyl)-2,2'-bipyridine] copper, copper thiocyanate, bipyridine copper with coordinated O, S, Se, or Te, and copper with coordinated alkylbipyridinylamine, alkyl substituted tripyridine, di(alkylamino)alkylpyridine, iminodipyridine, ethylenediaminedipyridine, or tri(pyridinylmethyl)amine. Of these, dicarbonylcyclopentadienyl iron (I) (II) iodide, dicarbonylcyclopentadienyl ruthenium(II) iodide, and carbonylcyclopentadienyl nickel(II) iodide and the like are preferred. These transition metal complexes can be used either singularly, or in combinations of two or more different complexes.--
